

Uncommon Wisdom
Common Sense®

Leonard, Street and Deinard's energy attorneys help clients build electric generation facilities. We represent generators as project counsel in the development of new or expanded generation projects. As such, our energy lawyers work together with our real estate, environmental, corporate and financial lawyers to provide comprehensive representation. We draft and negotiate power marketing documentation, credit documents, and agreements for online trading, wholesale and retail power purchases and sales, tolling, transportation and fuel supply. We also help generators work through the complex, FERC-mandated interconnection procedures and ultimately negotiate interconnection agreements with transmission providers.

Our energy attorneys help generators and marketers obtain and maintain market-based rate authorization. We counsel clients on market power, market manipulation and energy trading issues.

In addition, Leonard, Street and Deinard's energy lawyers assist generators and marketers in FERC compliance, including:

- Preparing and prosecuting at the FERC applications for exempt wholesale generator (EWG) and qualifying facility (QF) status;
- Drafting and filing applications for state certificates of necessity and convenience, site development, and environmental permits; and
- Providing advice concerning the structuring of energy companies under the Public Utility Holding Company Act of 2005 and preparing requests for exemptions.
